

MTS SUCCESSFULLY ATTENDS ARAB HEALTH EXHIBITION 2011

For the 6th year in row MTS attended Arab Health the most important medical technology exhibition for the MENA region. The enthusiastic feedback from long-time partners in this region as well as from other visitors shows the growing perception of the possibilities of shockwave therapy in the different markets.

MTS sales team attended the Arab Health exhibition that took place in Dubai World Trade Centre, UAE, from January 24th – January 27th. In the past years the medical technology exhibition turned out to be a unique chance to make the region familiar with the growing spectrum of treatment possibilities with shockwaves by informing local cooperation partners as well as medical staff.

Besides the possibility to make new contacts from many interesting markets throughout the region, Arab Health is always a good opportunity to meet with our partners that have already been supporting us and our technology during the past years. Thanks to everybody who visited our booth!

Using the tailwind from the just recently gained CE mark for our high-end system lithogold380, the evolving chances in lithotripsy business added to our last years focus on orthopaedic and wound healing sectors. The overwhelming response from visitors lets us look forward to a promising future in MENA markets.
